

Norwex

cleaning without chemicals

Tired of smelly sport gear?

Get rid of it for good with:

Sportzyme

Non-toxic, chemical-free, dye-free, biodegradable, water soluble, safe for any skin type, highly effective bioactive formula that eliminates organic residue that causes odour!!

How does it work?

Sportzyme contains dormant bacterial spores within the bottle. Once sprayed on a surface, the bacteria feed off food sources such as sweat, athletes' foot, moulds, fungal organisms, blood, urine and other microorganic entities that live in sport and work equipment, clothes and gear. The bacteria release enzymes that breakdown the entities into smaller particles that the bacteria eat and digest then convert to water and carbon dioxide (CO₂).

It will not work well on areas treated with bleach or disinfectant (these kill the bacterial spores), if the surface has been treated with either of these, please let surface dry completely before using Sportzyme.

Ideal for use on:

Hockey, ringette, volleyball, football, soccer, rugby, baseball, skates, runners, curling shoes, golf shoes, dress shoes, work boots, even Cowboy boots, snow boots, etc...

Team pricing incentive
